

No-Wrench Anchor – Beveled Helix

MPS is proudly rolling out an improved helix design on 3 models of our No-Wrench anchor to better assist with manual installations.

The new straight faced beveled helix (shown below) will facilitate improved penetration through the upper soils during hand-held installations. The beveled leading edge reduces the effort required to turn the anchor into the ground by hand and decreases the overall installation time. The smaller surface area of the helix allows the anchor to easily penetrate and cut through compacted surface soils.

The following No-Wrench anchors will be produced with a beveled leading edge:

Catalog Number	Helix Diameter (in.)	Rod Diameter (in.)	Rod Length (ft.)	Weight/each (lbs.)
J6524WCA	4	3/4	4.5	8
J6526WCA	6		5.5	12
J6528WCA	8	1
